

Pallet Forks

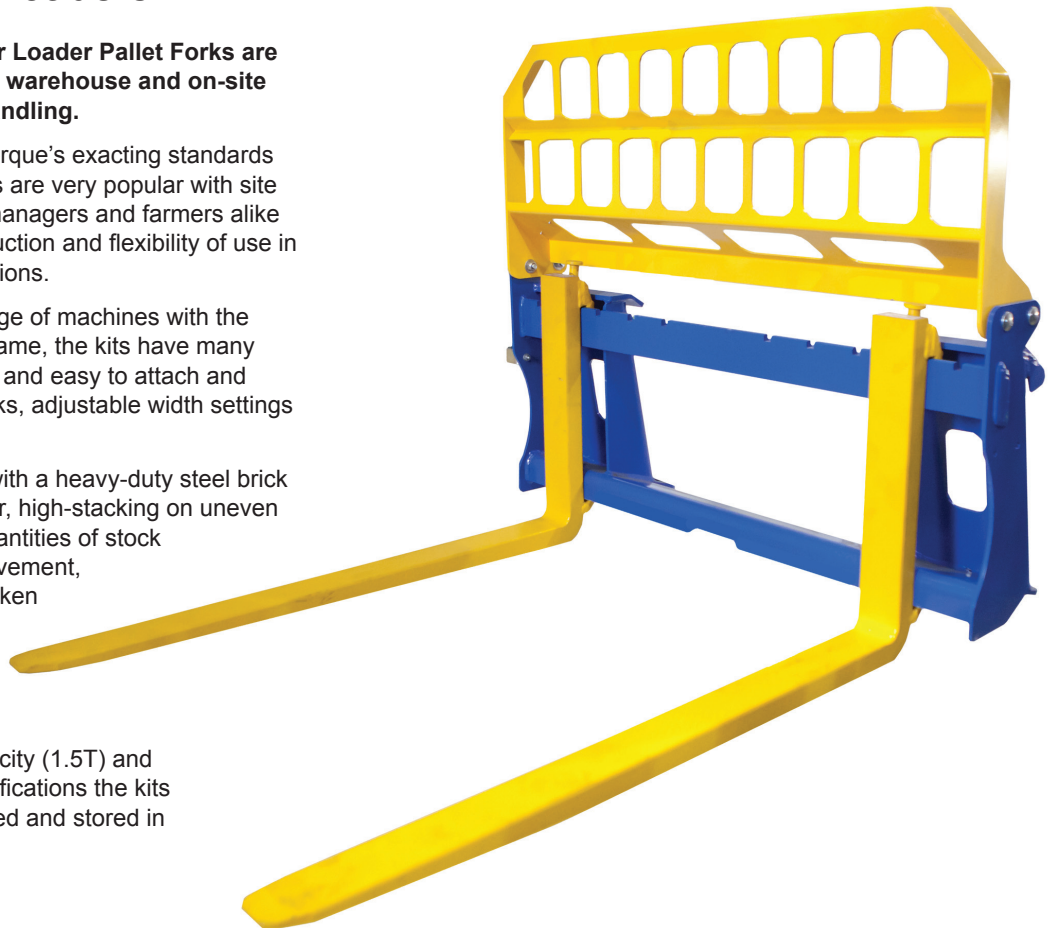

for Skid Steer Loaders

Auger Torque Skid Steer Loader Pallet Forks are the adaptable answer to warehouse and on-site stock and equipment handling.

Manufactured to Auger Torque's exacting standards these high-quality fork kits are very popular with site contractors, warehouse managers and farmers alike due to their robust construction and flexibility of use in many different work situations.

Designed to fit a wide range of machines with the 'Bobcat-style' mounting frame, the kits have many innovative features; quick and easy to attach and remove, high-strength forks, adjustable width settings and compact storage.

The kits come complete with a heavy-duty steel brick guard which enables safer, high-stacking on uneven terrain, allowing larger quantities of stock to be handled in each movement, therefore reducing time taken on specific tasks.

Available in medium capacity (1.5T) and high capacity (1.8T) specifications the kits can be easily disassembled and stored in compact spaces.
