

HARVESTING POTATOES WITHOUT COMPROMISE

The Ploeger self-propelled 3- or 4-row bunker harvester was designed focusing on the clients' demands: harvesting potatoes without compromise.

This machine exceeds in total sieving area: with the chassis on the outside of the sieving webs the flow of potatoes is free of obstacles, with no narrowing. Due to the variety of possible cleaning modules, it enables you to compile a harvester which fits your demands. The industry leading hopper capacity enables you to organize logistics more efficiently. Low transport speeds combined with the lowest possible drops and the unique SOFTPOCKET elevator guarantee a very friendly handling of the potatoes.

UNIQUE FEATURES

- ✓ More efficient logistics by the hopper capacity of 14 tonne
- ✓ Unequalled cleaning capacity
- ✓ Minimum maintenance costs due to the unique design
- ✓ Lowest possible drop on all transitions and into the trailer due to the unique design of the unloading elevator
- ✓ All webs have the same width: no narrowing down or obstacles in the product flow
- ✓ Great choice of various cleaning options;

Besides potatoes the Ploeger harvesters can be used to harvest numerous other root crops. Want to know more about the possibilities? Please contact your local representative.

THE MOST ADVANCED UNLOADING HARVESTER

The Ploeger self-propelled 3-, 4-, or 6-row unloading harvester has shown its class for over a decade, whether it's about harvesting potatoes or other root crops, this machine will make the difference.

The design of the machines results in unprecedented capacity and reliability due to the enormous sieving surface and the choice of various cleaning modules. The openness of the chassis gives the machine operator a superb view of the work and makes the machine very easy to service. The lowest possible drops, combined with the unique swan-neck elevator result in extremely gentle handling of the potatoes.
