

## Portable light cabinet

The Portable version of our CAC range of colour assessment cabinets is ideal for off-site visits to customers and suppliers and with a package weight of around 12 kgs it can be easily carried.

It is very easy to assemble - it just slots together and it comes with its own carry case.

The CAC portable cabinet is supplied with 5 light sources, which typically are:

- D65 'Artificial daylight',
- A UV - Ultraviolet light - used to detect the presence of optical brightening agents and/or fluorescent dyes.
- Tungsten 'F' - required by BS 950: part 1 (1967) as a test for metamerism
- 2 Point of sale or alternative fluorescent lamps, selected from the following 840P15, 830, Cool White, D50 or D75

You can specify the light sources you need, from the choice of lamps available for this product but the specification above is the maximum allowed for the CAC Portable.

### Notes

The lamp options 'A' and 'H' are not available for the portable option.

The Portable colour assessment is not available with dimmable options.

Please state required voltage when ordering.

The internal colour is Munsell N5 but if you have a need for an alternative internal colour such as Munsell N7 we can accommodate your requirements.
