- 1) With standard dies. Crimping range can be increased with special dies.
- 2) Theoretical with 10 mm cycle
- 3) See table for die set data
- 4) Maximum opening is the total die travel. Add this value to the minimum crimping diameter of the die set used. The result is the maximum opening of the machine with die set in place.
- 5) 1-phase / 3-phase

Finn-Power MS and UC controls represent the most advanced crimping controls in the market. An interactive MS can be taught the opening and UC control consists the possibility to be extended with various targets.

Both models save energy with their powersave mode and environment by using eco-friendly rapeseed oil.

An entirely novel construction makes it possible to use the machine both right and left handed and feeding direction can be from front and back. Also normal service actions can be made easily.
