

## Resolver

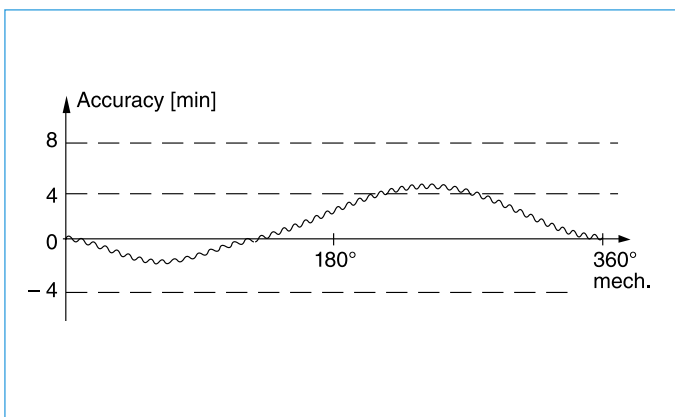

### RE-15

- Hollow shaft Ø: 12 mm max.
- Outer Ø: 36.8 mm
- Length: 16 mm

### RE-21

- Hollow shaft Ø: 17 mm max.
- Outer Ø: 52.4 mm
- Length: 26 mm

### Main features

- Operating temperature:  $-55^{\circ}\text{C} \dots +155^{\circ}\text{C}$
- Permissible speed: 20,000 rpm max.
- Accuracy absolute:  $\pm 4' / \pm 6' / \pm 10'$
- Accuracy ripple: 1' max.
- Rotor and stator completely impregnated
- 1/2/3/4 pole pairs

LTN Servotechnik GmbH

## Operating Principle

A resolver is a rotary transformer that provides information on the rotor position angle  $\theta$ .

The stator bobbin winding is energized with an AC voltage  $E_{R1-R2}$ . This AC voltage is transferred to the rotor winding with transformation ratio  $Tr$ .

The AC voltage then induces the voltages  $E_{S1-S3}$  and  $E_{S2-S4}$  into the two output windings of the stator.

The magnitude of the output voltages vary with the sine and the cosine of the rotor position angle  $\theta$ , because the two secondary windings are shifted by  $90^\circ$ .

Input:  $E_{R1-R2}$   
 Output:  $E_{S1-S3}$   
 $E_{S2-S4}$

Input Signal:  
 $E_{R1-R2} = E_0 \sin(\omega t)$

Output Signal:  
 $E_{S1-S3} = Tr \cdot E_{R1-R2} \cdot \cos\theta$

Output Signal:  
 $E_{S2-S4} = Tr \cdot E_{R1-R2} \cdot \sin\theta$

## Accuracy

The accuracy  $\epsilon$  is defined as the difference between the electrical angle  $\theta_{el}$ , indicated by the output voltages of the secondary windings, and the mechanical angle or rotor position angle  $\theta_{mech}$ .

$$\text{accuracy } (\epsilon) = \text{electrical angle } (\theta_{el}) - \text{mechanical angle } (\theta_{mech})$$

For each LTN resolver the accuracy is indicated in the data sheet by the terms 'accuracy absolute', 'accuracy spread' and 'accuracy ripple'.

The 'accuracy absolute' or the 'accuracy spread' is caused by the internal error of the resolver and the mounting error resulting in 1st and 2nd order harmonics of the sinusoidal signal.

At low speeds the 'accuracy ripple' effects the speed stability of a drive. This ripple is caused by 3rd and higher order harmonics. To ensure smooth drive performance even at low speeds LTN resolvers have an accuracy ripple of less than 1'. It is achieved by a patented procedure of stepping two lamination assemblies in the rotor.

Straight lamination assembly:

Stepped lamination assembly: (LTN patent)
