

DISPLAYS
— MASTER —

We create attention-getting displays that are custom designed to spotlight your product.

Our specialty is retail POP corrugated display. We do printing, laminating, die-cutting, folding and specialty gluing all in house under a 70,000 sq/ft facility. With advanced product equipment on site, we can produce the most challenging and unique displays. We adhere to the strictest procedures in production and the highest standards in quality control. As a result, we efficiently manage and control every step—from manufacturing to sales. In addition, our designers have extensive experience in retail marketing and branding, so you have the team you need to showcase your products and boost sales.

Shelved Displays / Counter Displays

Portable and practical, counter displays are a POP workhorse. Despite their small size, they can be hugely effective, especially if positioned near the cash register.

Shelved displays are an important piece that allows clients to showcase their product out from clutter on shelves. It is a top choice for those who must have their products stand out from the wall of product on shelf where brands lose their specialness and become commodities. Shelved displays usually come pre-packed with products, allowing the floor staff in store to refill the product with the most minimal of time.

Floorstand Displays

Floor Displays are widely used due to their durability, flexibility, and variety of product specifications. Shelved units readily allow for more than one type of product to be displayed. They can either be flat-packed, pre-assembled or pre-filled. Floorstand displays capture attention and invite engagement with your product where it can be touched and communicate its benefits.

Pallet Displays/ Dump Bins

Strength and durability are hallmarks of pallet displays and dump bins. They've got the muscle to make your product shine in any retail space.

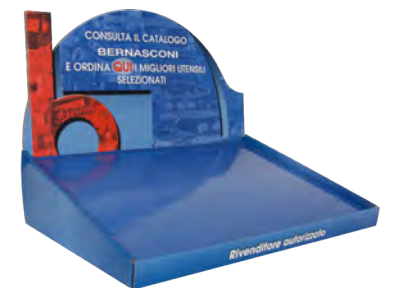

Pallet Displays are normally distributed pre-filled but can be flat packed. They come in size of quarter, half or full pallets. Pallet displays are the largest cardboard display unit and its advantages are the amount of product it can carry and that it is viewable from all 4 sides.

Dump bins are great impulse units. They are generally sent flat packed as very easy to assemble in-store. Dump bins adds a perception of value with the ability to hold many items in it.

Other Displays

Powerwings, standee, wall displays, PDQ, there are too many displays name out there we can't classify all in here. But whichever displays is it that you need, we can make it custom for you and here is just a few more to show you.

A man in a dark shirt and trousers stands with his back to the camera, leaning over a large-format printer. The printer is a wide, industrial machine with a large bed where a large, detailed landscape print is being produced. The machine has a control panel with many buttons and a small monitor on the right side. The scene is dimly lit, with a warm, yellowish light emanating from the printer's bed. The background shows a large, open industrial space with a high ceiling and some equipment hanging on the wall. The overall mood is one of focused craftsmanship.
