

Envision RV

View, Monitor,
Control and Update

Remote view access software for operator control stations

Access your OCS at your PC

- View and interact with Horner OCS controllers
Remote access to unit's screens, alarms and any graphical objects
- Easy to use
Intuitive interface, simple configuration and two display modes (synchronous & asynchronous)
- Single point of connection
Monitor several units on the network by connecting to just one

Envision RV View, Monitor, Control and Update

Reduce complexity. Save time. Save money. View and access your OCS remotely with software specifically designed for OCS.

Cscape™ EnvisionRV (Remote View) is a low-cost, powerful Windows® based software application that will allow you to view and access remote Horner OCS controllers via a personal computer. Horner's operator control stations combine a controller, I/O, operator interface and networking into one convenient unit using a single programming package called Cscape.™

With EnvisionRV, graphical objects look and behave the same on the PC as they do on the OCS. This feature reduces your training costs and can significantly speed up your implementation by using the familiar configuration tool Cscape™ to develop OCS screens or screens specifically for the PC.

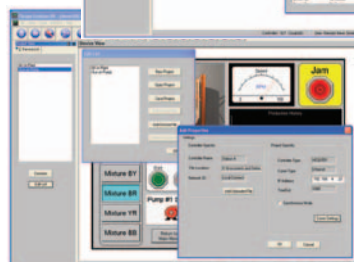

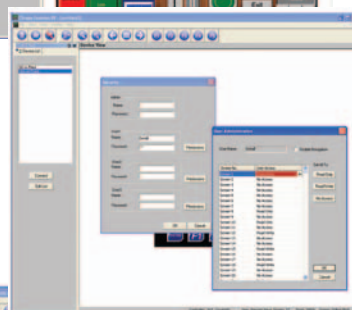

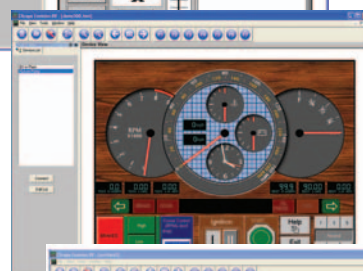

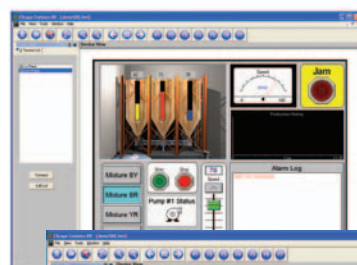

Fast to configure and fast to respond, EnvisionRV can be setup and configured in minutes... not hours or days. The full OCS graphics engine runs on the PC... only exchanging register data with the OCS. EnvisionRV minimises the impact on your controller, off loading a majority of the display work to the PC. The result is a highly responsive user interface.

EnvisionRV uses the Horner CsCAN protocol to transfer data, giving you the flexibility to support various communications options including: Ethernet, serial, USB, wireless, telephone, CAN and GPRS. With CsCAN you can easily connect EnvisionRV to a single unit on your CsCAN network and transfer data to/from any OCS device on the network seamlessly.

Envision the benefits...

- Real-time connectivity to OCS
- 3 levels of security per screen
- EnvisionRV's project utility allows you to easily organize device files
- User selectable dockable or floating tool bars
- Online web support with application engineers

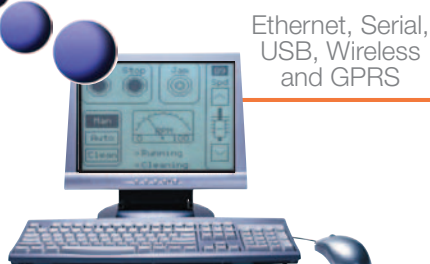

System Requirements: Microsoft Windows XP or Vista
400 MHz Pentium II or better, 40 MB disk space for installation, internet access for activation and XL Series, NX, LX or QX OCS.

View the same screen as appears on the OCS or a different one.

EnvisionRV incorporates 3 levels of security for each screen. You have full access control of your application.

EnvisionRV's project utility allows you to easily configure multiple OCS units. Simply double-click the unit you wish to view and configure.

CsCAN single point connect

Windows is a registered trademark of Microsoft Corporation.
