

# TECHNICAL APPAREL

COVERALL - BOILER SUIT - BODYWARMER - SWEATER...  
ALL YOU NEED TO WORK SAFELY AND COMFORTABLY

# WHY MAKING THE « 2M » CHOICE?

2M Offshore is specialized in technical work wear such as : coveralls, boiler suits, shoes, all kind of technical apparel (bodywarmer, T-Shirts...)...

2M Offshore deals with big offshore, marine or technical companies but also small businesses such as OEM or small offshore technical companies.

One of its major strength is its capacity to provides companies either with standards equipment and in small quantities or with fully customized equipment with high standard of quality and in medium or huge quantities... and in impressive delivery time.

## THEY TRUST US...

Major big offshore, military and shipping companies already trust 2M quality.

But confidentiality is also key for business...

The main 2M Offshore activity is to produce tailored-made coveralls. It means that we can provide the coverall of your “dream” gathering all your needs.

From the hamer pocket, to axilias holes...from reflective taps, to coverall lining... the coveralls your team will wear will be tailored-made. Summer, winter, hot weather, malaria areas... whatever you need!

Furthermore, you can add whatever kind of specific treatment on the coverall fabric; and we will provide you with the concerned certificate for your safety and quality department.

We could also arrange quality tests, to approve fire-retardant or pre-shrunk fabric for instance, with companies such as SGS.

Our production plant can deliver your order in less time than you will have to make your decision!

**This is the power of 2M Offshore.**

2M Offshore can also quickly provide you with small quantities of standard coveralls.

2M Offshore works closely with marine companies. But we can answer to any sector's requirements.

We didn't speak about the price yet... 2M Offshore is known for selling its product at the right price, but never with the less quality.

Safety first, but cost-savings also!

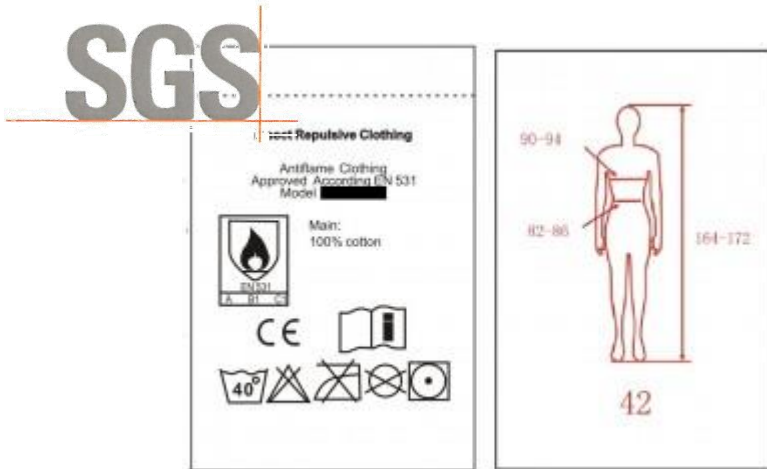

Whatever your required treatment is... we will do our best to provide you with.

Actually, we work closely with major raw material producer. And if you need a specific impregnated fabric with anti-insect (Malaria protection), we will work on it!

Fire-retardant fabric responding to European standard (FR EN531,A,B,C...) ... anti-insect impregnated fabric for Malaria affected area (10 washing certificate...), anti-static... We can manufacture products with famous fabric (Nomex®, Kermel®...) or equivalent fabrics meeting the same standards.

Each carelabel for each technical workwear will have the mention of the treatment required.
